ESG considerations have transcended mere trends, and have become vital in defining the success and reputation of businesses giving rise to the importance of sustainability. After environment, the important pillar is social. In the last few decades, the social component of ESG – employment conditions and fair treatment of workers – has grown among the public and shareholders, the frameworks have grown or multiplied to focus on these factors.

This program has been designed with a view to highlight the important issues of climate change, effect of greenhouse gases, effect of industries on environment and the importance of occupational safety and health and how it has an impact of the industries march towards ESG business management.

Join our 3-day training program designed to equip with the knowledge and skills needed to integrate ESG (Environmental, Social, and Governance) principles and OSH (Occupational Safety and Health) practices into their organizations. This course is ideal for leaders, managers, safety officers, and professionals aiming to create a safer and more sustainable workplace.
