Training Programme on “Accident causation Theories, Accident Prevention & Accident Investigation Techniques”
(26th November to 28th November, 2025)

पाठ्यक्रम के बारे में

Rapid industrialization has made life easier, at the same time it has increased the hazard & risk scenarios at workplaces. These workplace hazards have great potential to cause injuries, illnesses, or even death also. These incidents not only result in pain and suffering for the workers involved, but also lead to financial and operational losses for their employers. Every management of an industry is always taking best of their efforts to prevent accidents / incidents within their premises. Besides, the heavy costs due to accidents; it is a serious reflection on the standard of overall efficiency of those organizations where the accident rate persists at a high level. Accident Causation Analysis can help to figure out why an accident happened, and then prevent similar accidents from happening again.

After the training, participant will be able to understand, the fundamentals of Accident causation, Accident prevention methods and Accident Investigation techniques.

उद्देश्य

With proper knowledge of accident causation theories/ accident Prevention / Accident Investigation, organizations can implement

proactive measures to help minimize the incidence of accidents. By identifying and analyzing causal factors that lead to adverse outcomes, organizations can take necessary measures to intervene in the accident causation processes, thereby reducing risks and promoting safer environments. Therefore, knowledge of theories of accident causations/ Accident Prevention / Accident Investigation is a critical element for promoting safety and preventing accidents in different scenarios.
