Participants

This programme is designed for Supervisors, Safety officers, Engineers, Executives and academic persons related to above subject. Only 30 participants will be accepted on 'first come first serve basis' to ensure quality learning. The registration closes two days before the commencement of training programme.

About the Program

Fall from contribute to a large number of accidents in construction industry. Therefore, it is necessary to take all safety measures when working at height.

Scaffolds are temporary structures providing means of access and safe working platforms to facilitate working at height.. Properly erected and maintained, scaffolding provides workers safe access to work locations, level and stable working platforms, and temporary storage for tools and materials for performing immediate tasks.

The course will provide knowledge to the participants on Legal requirements and National standards for use of scaffolding, the correct terminology and components, the construction standards required at the place of work.

WE Nurture Safety Culture

The Program

It will give an insight of the common mistakes workers make when working on scaffold and safety measures to be taken when working at height, especially scaffolds.

The aim of this scaffolding training is to provide the participants knowledge to enable them to erect, inspect, use and dismantle scaffolds,

Aspects Covered

1. Hazards associated with working at heights.
2. Legislation and regulations
3. National Policy on OSHE
4. Risk assessment and hazard identification.
5. Proper use of ladders, scaffolds, and platforms
6. Types of scaffolding
7. Safety and Health requirements
8. Planning, access, erection and dismantling
9. Safe Harness use
